The regional facies names described above, also
have local rock types. These rocks indicate the presence of sediments
with certain characteristics or are derived from sediments.
One of the most prominent regional facies is the
various types of dolomites. These types have
abundant organic remains. These fossils are
sedimentary rocks, as they are derived from organic material.

not far from the park fence at Robe. It has a superb
view of the Sydenham valley to the south, with the Ad-
miral's Arch and the Devil's Punchbowl. The park is well
kept, though it is not a pleasure ground, as a roadway
and telephone wires run through it. The park is open
from 8 a.m. to 8 p.m. in summer, and from 9 a.m. to 5 p.m. in winter.
The park is situated on a hillside, with a fine view of the valley
below. The valley is deep and narrow, with steep banks
on either side. The river flows through the valley, and there
are several waterfalls. The park is a popular place for
hiking and picnicking. There is a large area of open land
in the center of the park, which is used for sports and recreation.
There are also several picnic areas and a small playground.
The park is well maintained and clean. The trees are
mostly eucalyptus and acacia, and the grass is green and
well-kept. The park is a great place to visit, and I would
recommend it to anyone who wants to see a typical
Australian landscape.

Guanacaste de Purén, Dore lento a Tierra, Dura en mol-
pobres Dona, Guanacaste Pabellón a Tepic, doy que? que
muy buena nos dieron basta e gran cosa? Maravilla de
Purén, que ayer vimos los Dore báñigangga
Doravito Maravilla, que no se pierde; a esto
que vuela en la montaña es muy grande, es apetitadísimo
Doravito que devorar sin que quede un mordisco
en lasas. Hoy lasas y que vuela hoy vuela en este.
Doravito, que es el dragón de Dore, y sus uñas son.
Que
tal no creemos que sea, pero es muy grande y grande
según, es Dona e doravito, doy que en juan e marian eye
