THE SOLUBILITY OF GLUTAMIC ACID IN WATER AND CERTAIN ORGANIC SOLVENTS*

By V. A. PERTZOFF

(Received for publication, December 5, 1932)

The solubility of glutamic acid in water was determined by (1), Pfeiffer and Wurgler (2), Pfeiffer and Angerer. In the course of an investigation of certain glutamic acid there became available samples of considerable purity. It was of interest, therefore, to make measurements with a view to determining the effect of temperature on the solubility of glutamic acid in water.
