

C O P Y

Stockholm, Sept. 8, 1931

Dear Professor Roerich:

With great pleasure I have received today your wonderful and beautiful book "Trails to Inmost Asia", and I could not help reading a good part of it at once.

May I especially express my appreciation of the intelligent and scientific way in which you have dealt with and described Trans-himalaya's orographical importance and situation in the Tibetan world of mountains. Geographers in England do not yet seem to understand the gigantic part played by this enormous system of mountains, but future exploration will give me full acknowledgment. Therefore, I read all you have said about my old Trans-himalays with such great and genuine satisfaction.

I have seen somewhere that Professor Osborn has complained of the attitude of the Chinese towards foreigners. As far as I and my expedition are concerned I cannot agree with this criticism. The Chinese have treated us Swedes in a most generous and hospitable way and we are still collaborating in the most harmonious and friendly way with Chinese scholars. Those Chinese who are members of my expedition have also made excellent work. I cannot praise sufficiently such able men as Professor P. L. Yuan, Mr. Hwang Wan-pi and Mr. Parker C. Chen. Several of the students in our service have also proved to be very careful and reliable observers.

My expedition, to which I soon will return, is working in 8 different groups in Sinkiang, Kama, Gobi and Mongolia. My Swedish archaeologist, Dr. Folke Bergman, has found over 10,000 Mss on wood from the early Han Dynasty - at Etsin-gol. Dr. Erik Novin has discovered the Permo-Carboniferous ice-age and has definitely settled

Stockholm, Sept. 8, 1931.

Dear Professor Roerich:

With great pleasure I have received today your wonderful and beautiful book "Trails to Inmost Asia", and I could not help reading a good part of it at once.

May I especially express my appreciation of the intelligent and scientific way in which you have dealt with and described Trans-himalaya's orographical importance and situation in the Tibetan world of mountains. Geographers in England do not yet seem to understand the gigantic part played by this enormous system of mountains, but future exploration will give me full acknowledgment. Therefore I read all you have said about my old Trans-himalaya with such great and genuine satisfaction.

I have seen somewhere that Professor Osborn has complained of the attitude of the Chinese towards foreigners. As far as I and my expedition are concerned I cannot agree with this criticism. The Chinese have treated us Swedes in a most generous and hospitable way and we are still collaborating in the most harmonious and friendly way with Chinese Scholars. Those Chinese who are members of my expedition have also made excellent work. I cannot praise sufficiently such able men as Professor P. L. Yuan, Mr. Hwang Wan-pi and Mr. Parker C. Chen. Several of the students in our service have also proved to be very careful and reliable observers.

My expedition, to which I soon will return, is working in 8 different groups in Sinkiang, Kama, Gobi and Mongolia. My Swedish archaeologist, Dr. Felke Bergman, has found over 10,000 B.S. on wood from the early Han Dynasty - at Stein-gol. Dr. Erik Novin has discovered the Permo-Carboniferous ice-age and has definitely settled

the question of desiccation in central Asia. Dr. Nils Herner has discovered and surveyed the new Lop-nor. Dr. Nils Ambolt has determined with Invar pendulum the gravity of many places of Eastern Turkistan. Dr. W. Houde has sent up 353 pilot balloons to a maximum altitude of 21,000 metres. I have 4 very able Swedish geologists working in Central Asia and they will give a quite new idea of the structure and stratigraphy of the great continent.

A popular volume on our expedition will soon be published by Routledge & Son, and a copy of it will be sent to you. If the interest of our work is greater in America than in England I should like to publish a book there on some of our results. The antipathetic attitude of the English-speaking world towards my work is probably due to my sympathy for Germany during the war, a sympathy which now is stronger than ever.

with my sincerest thanks,

Very truly yours,

(Signed) Sven Hedin
