Vol. 1924

S. Pavel

There can be no doubt that the present day ways of curing practised among the Tibetans, still people have for the most part deviated from the original ways. Since the advent of the "English" medicine & more "European in general the local ways began to die out until they came to that deplorable half forgotten state.

At present one can find but a dirty form which by means of incantations and two or three medicines which survived from the vast previous medical knowledge and pharmacopia tries to cure every illness on hand very often with fatal results. I dare say the European never tried hard to make a thorough study of medicine (local) fumbling it thus to sink into a state of forgetfulness.

There is a book in Tibet called the "Blue Jewel" which is an effort

work treating on medicine is general.
But what is interesting is not that
official knowledge but the
popular unsuggested beliefs that
have been recorded and in
most cases died out.
That particular case is often met
with in other countries where
the advent of so called enclosed
methods will kill the popular
knowledge of nature & the
beliefs of peasants and people
that have actually lived with nature
for so many generations and known
it.
The ordinary way of dealing with
these beliefs is just to say
"superstition,"
"Survival of many cases when these
"superstitions" were the real keys
for the solving of many a riddle
still they were thrown away
and died out.

How much attention is attached
to musk. The tonic qualities
of that product are known quite
well. It is frequently used by
druggists. It has a power of increasing
vitality and many other useful
sides. But are they all investigated
or are they combined anywhere with
those other life giving tonics
the very presence of which would
make musk a hundredfold more
effective. The Ayurvedic
medicines give much attention
to musk to do all tibetan
medicants.
Can musk be substituted when
an important question comes up
Probably yes.
The gland that has to be consumed
by the musk deer in order to produce
good musk is known. Well has it
been investigated? ——

a snake can't stand the odour
of musk. (A way of investigating
if this musk is good or not).
for it any power of counteracting
the opposite poison.
The Plant in this can gain the
a good remedy against the snake
bite are not frequented by
snakes I think there is only
one snake that lives near
them but I don't think it is harmful
they say that nicotine is the
very best snake remedy. Giving
the most marvelous results.
It hasn't been investigated either.
The three sacred fruit of Sukun
that are supposed to be given
by Gautama Buddha were
they investigated properly if not
the Cedar tar could been properly
investigated from ancient times
It was considered life giving
in Sanskrit it is called
Devadaru that means

timber of the Gods."
"Is the known qualities of pine tar
far are they identical with
that of Cedar tree? has it
the same curative properties?
As far as I know it is quite inferior
to that of Cedar tree.
Try to find those old beliefs
those superstitions" and without
damning them as a product of
uncivilised mind investigate them
and give them a fair chance
of a thing that has been tested
thro practical experience.

Musk.

It is difficult to ascertain the furtherance of musk. Our research can lead us to the following conclusions. The pouch or pod is filled with musk only in adult animals which means that there is a gradual deposit of musk in the pouch itself within the thin enveloping tissues pearced by blood vessels. ——— In many pouches I have observed a cord like protuberance like a blood vessel or duct which concealed in the walls of the pod grows out of it to the length of 1 or 1½ inch somewhere to the centre of it. It is difficult for me to ascertain as to the forthcoming of that duct or vessel as I have seen it only on dreadly cut out pods which were unfaborably dried. I have a suspicion that it might have been an outgrowth of the blood vessels an abnormality may be due to the clogging of the

original opening of the pod which served to deposit the surplus musk on the outside.
However there are just mere guesses and nothing definite could be said.
The oesophagus is composed out of ring like muscular tissues. The most probable way which was put forward by several experts is that the animal being a very timid one when ~~scared~~ has its process of digestion stopped or disturbed and the non digested or elaborated particles of food rust thru the system and are deposited later in form of a sanguine mass into the pod. I never did find it out myself and therefore I have to believe what other people have to say about it.
It is evident that the musk is some by-product which does not play any role in upkeeping that animal otherwise the musk wouldn't be periodically lost from the pod by the animal rubbing against

trees.
The excess of musk is especially prominent during the period of heading which apparently corresponds to what has been said before as the blood circulation is more rapid and the pocess of dejestion is most likely to be disturbed. I can't say anything positive as yet as I never had a chance to observe these things my self.
The fact that the musk does not play any role in apeasing the animal might be made evident from the fact that the part of musk discharged by the animal as surplus is recognised as the sanguine deposit on the bottom of the pod. The musk itself contains a strong odorous substance of unknown origine. I think that smell can be traced to the food of the deer.
The leaders say that musk is best

where there is an abundance of the Phaly(tic) shrub. which is a small about 10,"12" in hight evergreen shrub with a strong smell well preserved after it's dried. The shrub is used by the Tibetans during their ceremonies when it is used as incense together with other odorous plants. (as species of pine trees the deodars (kind of cedars) etc.). The smell of the plant when fresh is stronger of course than when it's dried and especially the white flowers which are about half an inch long. The shrub grows on the hills (rocky) covered with snow over 10000 feet in altitude.
The musk deer eats that shrub together with another one related to the first but apparently with red flowers (I could not get the latter). (The musk deer is said to eat chipley* grass and several roots but I doubt it). These once I shall investigated yet.
* Chipley is a Nepali name.

Except that above mentioned stuff
which in Sepeta is Dup. Musk
deer eats the following grasses:
(

Except grass the deer eats in great
quantities that kind of salt
found in the Himalayas it is
supposed to be one of the chief
ingredients of musk.
I haven't seen that salt yet but
I expect to in 3, 4 weeks.
Salt.

The musk is a well known remedy
known from times practically immemorial
known during the reign of king Solomon
and earlier. The name musk is
supposed to be the spoiled
Portuguese "Moscos" the name
they gave it when first gone
to china. The arabian for musk
is misk and the real name is not
ascertained. The Chinese is Heang
The Tib. "la" La-wa means deer
The Lob in for it is moschus moschiferus

The arabian stub (cougnen)
(Abelmoschus abelmoschus)
from the arab. Abu-l- misk
which means father of musk
is probably related to the
Poles of Tibet but I had no
stone as yet to compare them
as I did not procure the abelmosk
yet. The Abelmosk stub bears
musky seeds. Grows in the West
and East Indies as well as in North. Africa

The use of musk in medecine is very wide I mean the native and middle-aged one ——— Now it is used as general tonic in India and Tibet. India uses it with a gold compound which always played a great role in Ayurvedic medecines. Of course musk is usualy substituted by the most inappropriate grounds but occasionaly one can find a real product.
Musk affects the human body thru the mouth, the lungs, the stomach & nose.
Very much like terpentine.
Stat is also proved by the fact that musk seems to contain tar. and various similar ingredients. ——.
It's smell when strong has a sort of exciting effect on the nervous system. and when taken in increases the blood action.

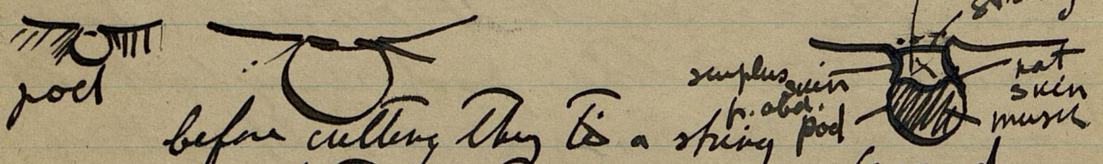

It is used against fevers.
But from what I gather from natives and old receipts it is a strong blood purifier which is also effective in sexual debility as it invigorates the system.
There might be a remedy against snake poison in it as snakes cant support its smell even if kept at a big distance. The same is true of the plantain tree and it's curative power in cases of snake bites is very effective.
Thus the yogis in old days used to wear necklaces made out of musk grains thus protecting themselves against snow and cold they say. It is perfectly in accordance with what was said beforehand that is that musk increases blood action.
If rubbed in places of inflamation musk heals such, also in cases of sores etc. ———

At any rate musk must be recognized as a very effective tonic.
first of all.
Musk is very widely used in Perfumery where it is the base of many perfumes. It has the wonderful quality together with the other animal fixatifs as civet, castoreum, ambes. to render a perfume what the french say "tenace" that means it does not evaporate but stays on.
The substitute known as "musk xylene" cannot take the place of the original product as it is a chemical compound lacking that unknown quality of genuine musk.
The original product can be substituted only by means of a chemical compound of all the original ingredients blended in the same way they are in the animal itself.
(To be continued)

Continued.

Lets discuss the ways of pooling the product they undoubtedly shall be found very useful when aquiring that product.
The Tibetans seldom use elaborate methods tho I must say I was a victim of a very clever fraud. The navel was quite undamaged and I have cut it open and taken out the musk. The musk well formed was somewhat dry but never showed any falsification of any kind. (We must note the pod was unusually big.
When I weighed the pod (empty) and the extracted musk I have found that the pod weighed the same as the musk itself which was rather suprious as in big pods the weight of musk always noticably exceeds the pod.
I cooked over the pod. It was

an odoury looking empty pod.
The skin at the bottom of it was
somewhat thick but that was
probably due to surplus skin
cut out of the animal at the time
of the cutting out of the pod.
I only had to wonder at that unusual
weight of it.
Only 1 month later while examining
the same pod for purposes of anatomical
investigations I happened to cut the
bottom part of it only to find that
a thin layer of admixtures in
order to make the weight thereof
it should be and considerably too
The following diagram will illustrate
it.

before cutting thru is a string
round the neck of it.

string put to above musk but much
higher in order to slip into the cavity
foreign matter.

It was a most clever fraud
which I met for the first time ———
Not at all considering to Tibetans.
pounds usualy consist in the admixture
to the produce dried liver, dried
powdered beans, bits of vesicular ——
skin (costing 1 per tola). The means which
ensure to the pods post excessive
stuffing with foreign matters are most
cleverly pasted together by means of
sanguine skin. which is very difficult
to be detected and can be done
only by immersing the pod for a few
moments in boiling water.
The Tibetans usualy add a blood
or bits of lead in order to increase
the weight. The latter can be
easily exhausted and the only loss
is the weight to the musk itself
which usualy suffers from the
above mentioned frauds. ———
It is difficult to describe all kinds of
pouds. experience is the only best way
and it's best to buy musk pom pods out in your
presence.

The other medecines.

Known from times immemorable in China, Mongolia etc. ———

They are the famous root Djen-Shen which is a universal cure sold for about 2000 – 5000 dollars per root. When old has the form of a human body.

Every old root has a history attached to it. Many human lives have been lost on it.

It is not investigated yet as it is much too expensive and than the European mind always feels adverse to all sorts of local medecines no matter how good they might be.

It is effective in any desease and is known to produce miraculous cures. Unfortunately we don't know much about it.

((to be Continue))

2

The consequented horns of the Siberian deer a dog. called in Russian „Panty" and the deer „Maral."

( ) Lab.

They are cub from the heads of young animals and then dried. They are in great esteem in Chinese medecine the Chinese buying them from Russian traders.

The Russians don't use them at all. as far as I know.

3.

Bears bile against billiousness. is used on a very hood scale by all the Chinese it is also used for general debility. It has'nt been investigated yet as far as I know.

The chinese also attach much importance to musk of course.

the three most important
medicines to be investigated.

"Bears bile" billeamen debility, gout.
"Пантыу"
"Musk. tonic, inflammations,
Cedar tar. tonic, anti. diseases.
Dzen-Chen. universal healer.

The most important of remedies is
the toxin that can restore health.
The o.c life force.
That making our glands work and
combs disease that can affect
us. They will make us immune
to all sorts of sicknesses.
The other help!
is the ray method.
by combating the emanations
of microbes we combat the disease
itself. The human body has
a + or ∝ emanation fixed for
the healthy condition of our body
the s.c. universal ray is the ray
which consumes all foreign
emanations s.f.s. and purifies
the ∝. The health giving
medicines can be given by
By strengthening the emanation
of the body we strengthen the body
& vice versa. This can be done
as far as the body and the light
can goes. (the emanation can)

For the tonic we must consider the medicines that purifies and strengthen the blood action that purifies and strengthen all the organs and glands.

The extract of Bale is a stimulate
The extract of wild Canabion
is a Lad healer.
The extract of barley is a soothing
strengthening emolient for the
cases of stomach and stomach
The ext of the Cahinca root.
is a blood purifier which stops
the action of poison and
evidently the action of other
blood affecting sicknesses.
Valerian root ext is a nerve tonic.
Cedar bas is a tonic and

для звуковых (ультра) лечения рака. опухолей и коружек. восстановления тонц.

Начало свет. лечений.

Лечение рака.

Растениями отвлекающими на ультра-звуковые
вибрации пустивающий рак являются
ячмень, рожь и морковь.

1) Ультра-звук.
2) Вспрыскивания экстр. спорыньи.

Давать для очищения крови. (ревитавед).

Лечение туберкулеза.

Как в легких так и вообще. Лучше всего
поддается лучу солнца. Его надо пропустить
через меловое и кварцевое стекло.
Надо сконцентрировать луч на больном
месте. Производить лучевой массаж;
действуя по кругу. (очищение крови) (Тонис).

Для очистки крови
Лучше всего сироп из моркови
Тонис хорошо вычищает давать
но надо давать последние осторожно.
Вредно для тех если кости.
Морков. сироп дается на тощак по
рюмкам начиная с 2; отлично действ.

Для оспы.
Препарат из можевельника.

укрепление организма. (вообще). Для
общего укрепления женщины в древности
давали смолу кедровую.

Нарушения.

Для нарушений кишечника (мышц) ртуть
по осторожно, ибо ртуть враг быстрых
мышц.

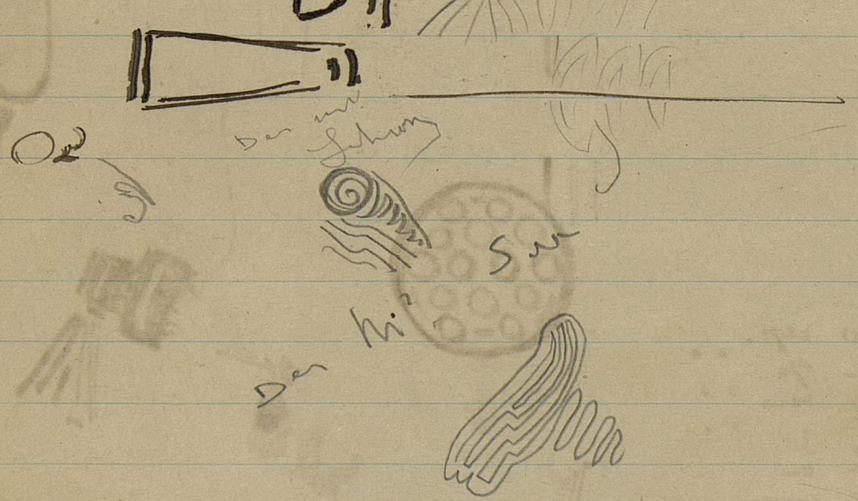

Когда бросается на волосы и появляется
экзема (и выпадение волос) надо препараты
из кедр. смолы.

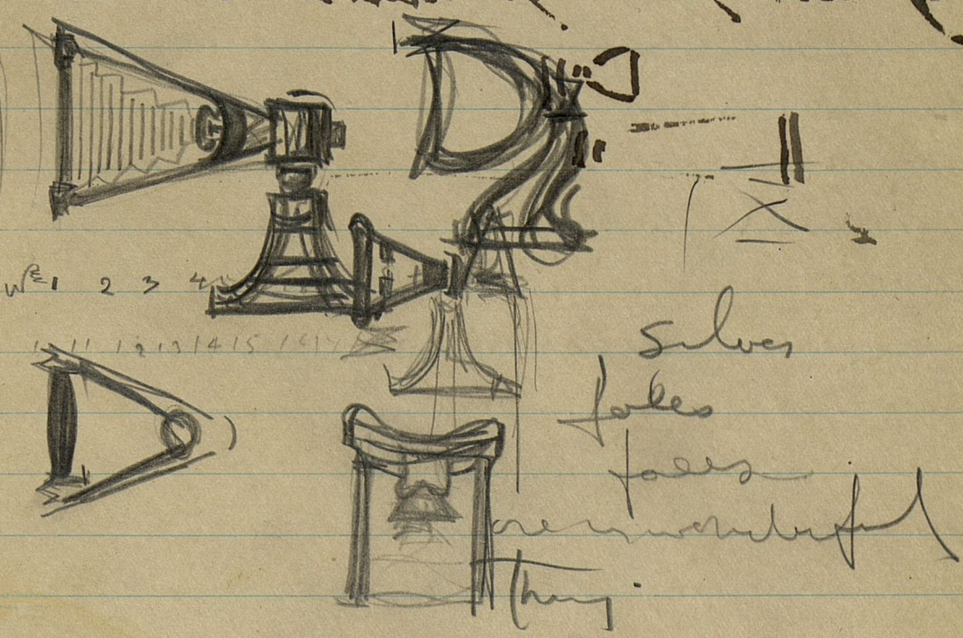

Аппендицит.

1 стадию можно разогнать вдыханием
либо (удаление нервов)
Иногда надо оперировать.
Удаление аппендицита вредно для центров.
лучше всего вдыхание либо можно
разогнать нервный узел.
Лечение всегда предпочитает. хирургии.
думаю любой микроб рождать может.
Насчет порождения мяса и костей.
Трудно если кровь нечистая
При жизнеспособности можно. ———

аппаратъ

1) для туберкулеза ——
2) для звукозрительных (эпилепсія)
3) для ультра звука (дальнозр.)
4) для лечения малярии
5) Соед. звука и света.
6) Соед. свѣтов. для лечения тиф.
7) Соед. проекторъ. ——
8) Соед. проекторъ со звуков. апп.
9) Ап. для получ. ультра синихъ

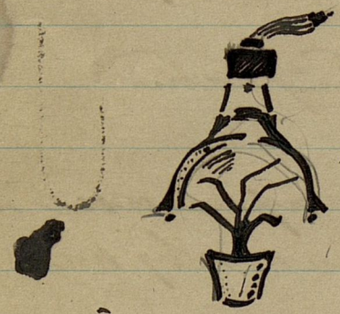

Malaria.

в кв. сист. излучается серум посредство солнечных лучей. ——— усиление через стекло. дальше наблюдения по дистробуционной норм крови. от сердца ———

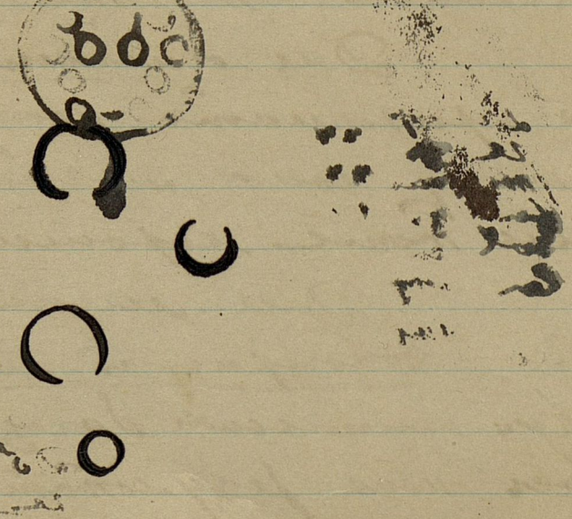

иммунизация растений очень важна.

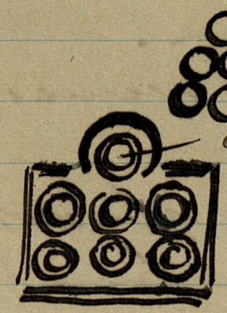

микроскоп

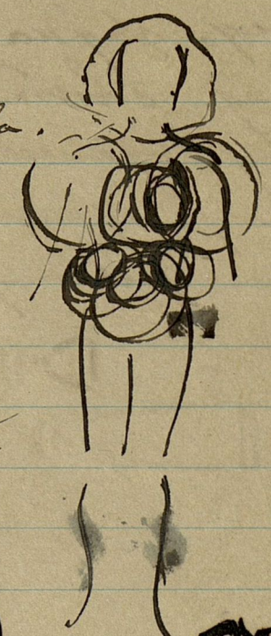

и для лечения туберкулеза.

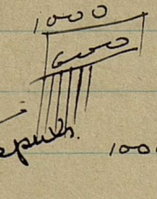

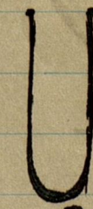

для лечения и укрепления организма. аппараты посредством лучей.

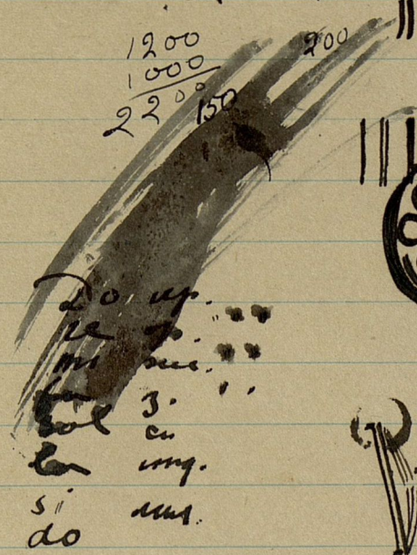

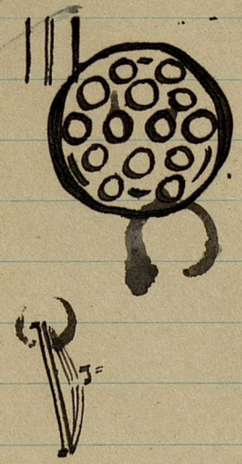

сыпнотифозная.

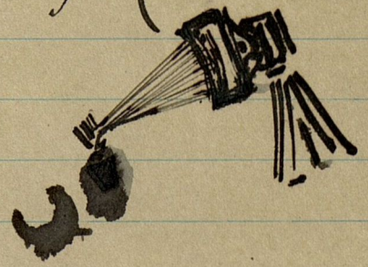

До пр.
Дб пр. пр.
пр пр.
пр.

Туберкулез.

Для лечения туберкулеза надо направить солнечный луч через ниловое стекло (иварцевое) и делать круговой массаж. Лучем луч по интенсивности доводить можно до ожога.

Ран и лечение опухолей.

Ультра звуки. Ультра звуки пульсирующей энергии должны будить в организме и лечить.

Для чего очищать

Очищать.

Для лечения кожи надо применять ультра звуки на тканевую звука восстановлять ткань.

Для очистки крови.

Надо принимать каждое утро на тощак грамм сока моркови.

Можно тоже хорошей очищать.

Для лечения сердца

отравлений никотиновых.

При никотиновых должны в холодной воде или растирать легкие грудь давать сильную струю.

Лицей 4. глава 2.

I

1) При Туберкулезн. (Tuberculosis) легкия лечить (кои в частности кожа и вообще) лучше всего поддается лучу солнца. Его надо пропустить через фиолетовое стекло ( ). Надо концентрировать луч на больном месте. Производить круговые движения; действуя по кругу, дойти до конца. ———

II

Для лечения крови лучше всего) сероводородные. Такие хорошо вылечивает туберкулез. (он вредит уже при одном часе). (Сущность катарального явления вредит) [отметить. сравн.]

Морозов действует на посредника по рефлекторным путям сна; отлично действует ———

III

Для оспы.

Молниеносных. (Septica) ———

IV

Для укрепления организма. общаю
с древности жрецы давали смолу
кедровую.

V

Для наружных применений (мазей)
ртуть, но осторожно, либо ртуть
вдыхать быстрых испарений. ———

VI

Ртуть хорошее средство (при паралич).

VII

Для наружных мазей (при разложении
нужна бросается на волосы и (экзема)
(выпадение волос) смола кедровая.

VIII

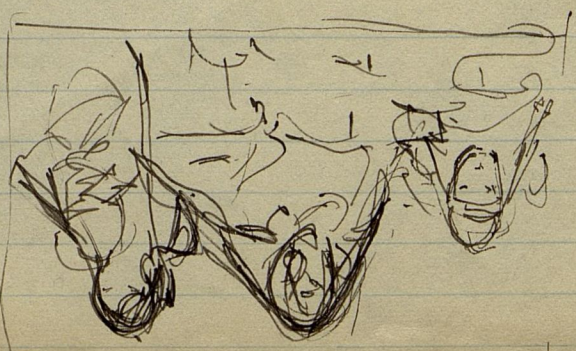

Родит дорожки для растений, и конечно
иметь большие (перегной т.е. растения
помогает росту растен.

IX

Анестезия (стоит много разгонять
бутылками (удушение нервов)
Но иногда надо оперировать
удаление вредно для цветов.

The days going on, the sun is about to visit distant lands. Why then are you so sad my heart. Why do the shadows of approaching night frighten you my soul? The white mist left the valleys below the evening hills and ~~ending~~ over the mountain range. Like cool a blanket for the weary night are the mountains covered. Why leave you gone my Sun. — Thy rays have gone far ahead into distant lands. What message do they carry to the drowsy world. The day ~~can~~ becomes ~~can~~ as they leave follows it. The

Verily – da I say.
What is the good of warning persons ~~of~~ ~~good~~
when the ~~good~~ is so very taxing ——
Verily such is life.
We forget the surroundings
of life close us in and try to swallow
us. Do they swallow us they do
~~they~~ most certainly do. ——

Notes on medicine ——— 1910
——— General ———

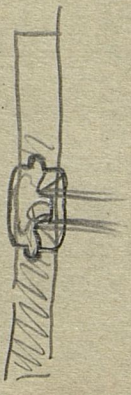

The Ultra sound waves being established they should be combined with the general treatments.

On sound waves.

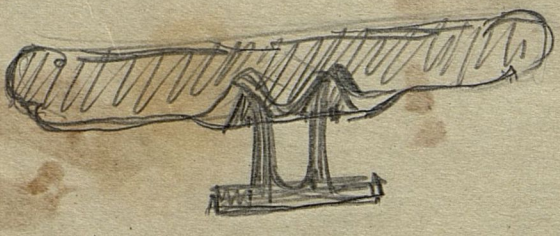

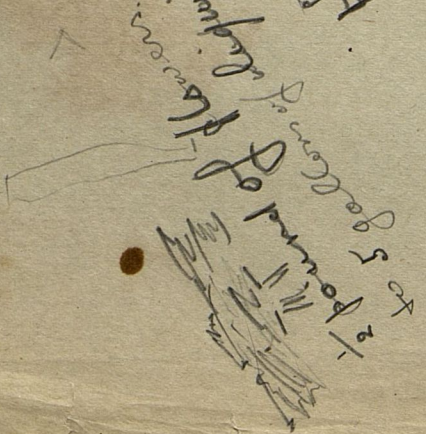

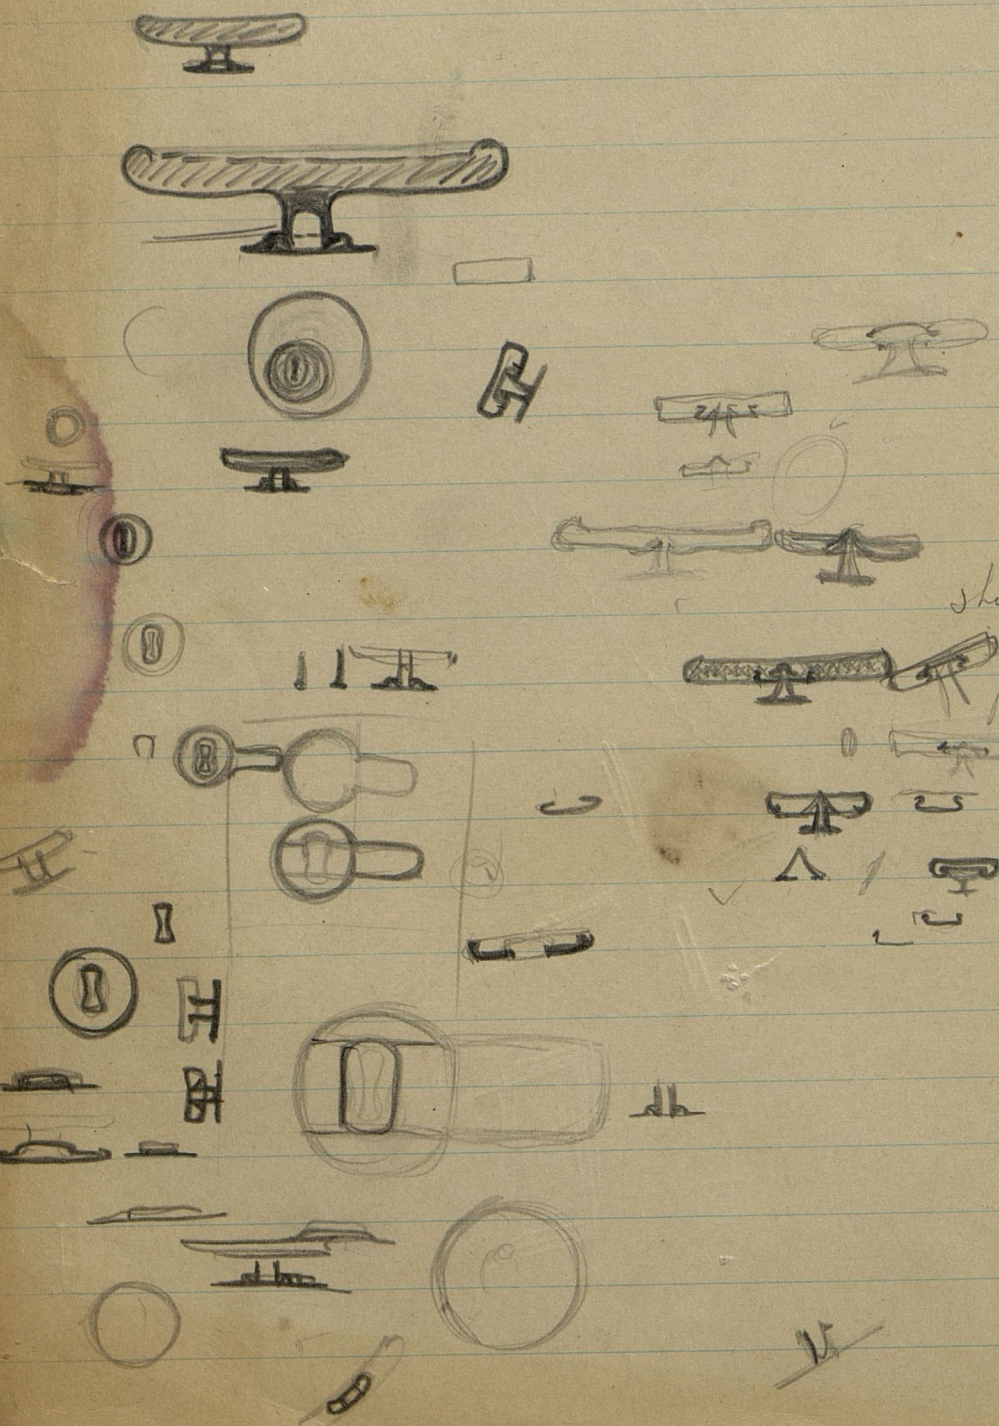

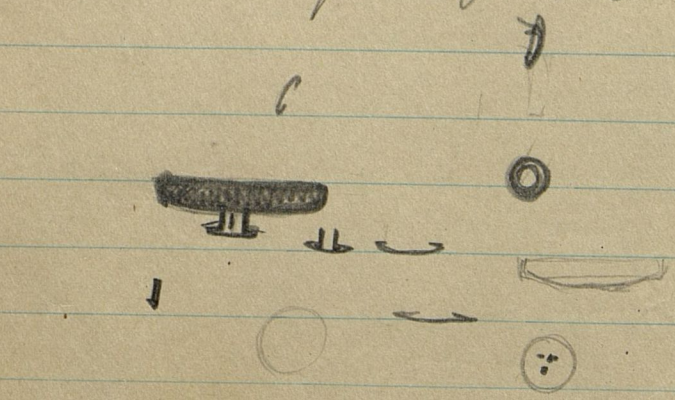

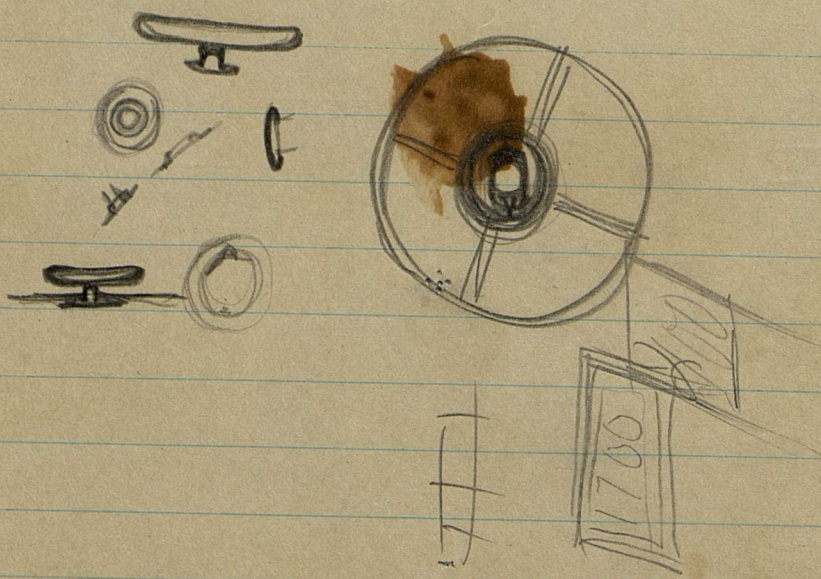

Note

Notes.

Buttons for suits, coats. etc.
Buttons for shirts underwear
Buttons for spats & shoes.

It is much better to let things grow upon one's mind. A few simple things said with conviction behind them are much more useful than a dozen of facts others are of no immediate need.

The real need is right in our everyday life. [illegible] and mention how we [illegible] the greatest things that surround us and those in the universe.

[illegible] country boy. [illegible] was one to [illegible] attention to, [illegible] [illegible] was one out with a writer in the field at sunrise, and when night turned to him and said why isn't wonderful, answered Yep rises every morning. We are so used to things
