

Astrology.

4 I

The Aquarian Age has begun, according to Chene
1762. The Vernal Equinox was in 388 B.C.
It takes 2150 years retrograde through a sign,
and it takes 70 years & months to go through
one degree hence man's life is compared
to a day. (Three score & ten) —

The degrees of Aquarius have been entered thus:
1762. 1882. 1903. 6. months.
40 5
1984. 3 months.

Saturn goes through his
Cycle of revaluation once every 29-30 years.
A sign means year for the Aries nations
is in 1937 also the middle of the
3 degree since the Aquarian age and the
33 degree since the Vernal Equinox —

of Kali Yug. Started 5000 years ago. They
must have been at the time when the Sun left
Taurus for Aries. (apparently) but it would be more
logical to say that it began at the Vernal Equinox
of 388 B.C. however there may be some other
unknown to us cycle. that has length to do
with the retrogression of the Sun through the signs
of the Zodiac.
